

# Whisper Jet

## 2" Air Injector

- Quiet Operation
- Precise Air Admission
- Easy Timing Adjustment
- Filtered Air
- Simple to Install

## Quiet Operation

The Whisper Jet valve which opens to allow air into the system and closes to shut the air off is operated by vacuum. There is nothing which hammers open and shut causing loud noises and vibration which eventually wears the apparatus out.

## Precise Air Admission

The amount of air admitted each time the air injector operates is what determines the solution velocity. The Whisper Jet has a simple and easy way to precisely control the air admission.

## Easy Timing Adjustment

The Whisper Jet has a solid state timer to control the ON and OFF time settings for the valve. It has two turn knobs which sets these times simply and accurately.

The Whisper Jet valve has a 2" Clamp type SS fitting for connection to the wash line. The solenoid and timer are provided separately for mounting inside an automatic washer control box.

## Simple to Install

separately for mounting

## Filtered Air

The Whisper Jet comes with a foam type air filter which meets regulations for mounting in a milking parlor.
